

Story 2,3 &5

COUNTRY VS COAL -1) Comparing CO2 emissions per capita from coal between different countries.

In this case, you would need to gather data on the amount of coal each country uses for energySure, based on your initial prompt, it seems like you are asking for a comparison of countries based on their per capita CO2 emissions from coal and their overall CO2 emissions from coal in comparison to the rest of the world.

To begin this analysis, we would first need to gather data on the per capita CO2 emissions from coal and the total CO2 emissions from coal for different countries and compare them to the global average. Here's how we can do that:

1. Data on per capita CO2 emissions from coal can be gathered using statistics released by various international organizations like the World Bank. The data could ..
